🎯 4–5 MONTH TRANSFORMATION ROADMAP

Phase: Muscular & Shredded (~9.5%–10% BF)

Muscular & Shredded Transformation Blueprint

Target Physique: ~69–70 kg @ ~9.5%–10% Body Fat (Razor-Sharp Definition)

69–70 kg	9.5%–10%	29.5"–30"	145–155g
TARGET WEIGHT	BODY FAT	TAPERED WAIST	DAILY PROTEIN

✓ **Aesthetic Golden Ratio**: 3D rounded deltoid caps, wide lat V-taper, and thick upper chest shelf.

✓ **Razor-Sharp Conditioning**: Deeply etched six-pack, visible serratus anterior, and tight obliques.

✓ **Postural Correction**: Anterior Pelvic Tilt (APT) reversed through daily vacuums & high-stance glute drive.

✓ **Athletic Stamina**: Explosive sprint speed & zero cramping across 2 hours of Saturday turf cricket.

DAY 1

⏱ ~65 mins

Day 1 — Upper Push

Upper Chest Shelf, 3D Shoulders & Horseshoe Triceps

Focus: Upper chest clavicular shelf, lateral deltoid capping, and heavy triceps lockout.

Move #1 • Motion Loop

#1 Seated Incline Chest Machine

Upper Chest (Clavicular Head Shelf)

3 Sets × 8–10 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

Loads the upper clavicular fibers of the pectoralis major directly beneath the collarbones to create a dense, elevated upper chest shelf.

📐 Setup, Stance & Grip

Adjust seat height so the machine handles align level with your upper chest / clavicle. Plant feet flat with heels driven into floor.

💡 Form Cues & Execution

Pinch shoulder blades against back pad. Press diagonally upward and forward, driving biceps toward collarbones. Squeeze for 1s at top without rolling shoulders.

⚠️ Common Mistakes to Avoid

Setting seat too low (turns into a shoulder press) or flaring elbows at 90° (impinges rotator cuffs). Keep elbows tucked at 45°–60°.

📈 Next Session Progression Target

When you hit 10, 10, 10 reps with zero shoulder compensation, increase machine weight by +2.5 kg next week.

Move #2 • Motion Loop

#2 Flat Barbell Bench Press

Mid & Lower Chest (Sternal Pec Mass)

3 Sets × 8–10 Reps | 2 mins Rest | Double Progression

🎯 Target Muscle & Activation

Primary compound builder for thick sternal chest density and overall horizontal pushing power.

📐 Setup, Stance & Grip

Lie on bench with eyes directly under the bar. Retract shoulder blades, slight arch in lower back, feet planted firmly for leg drive. Grip slightly wider than shoulders.

💡 Form Cues & Execution

Unrack bar and pull shoulders down into back pockets. Lower bar under control to lower sternum/nipple line with forearms vertical. Press up explosively in slight arc.

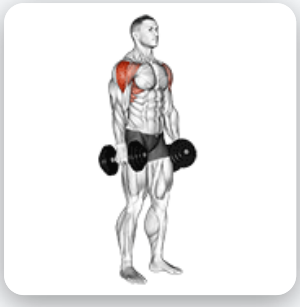

⚠️ Common Mistakes to Avoid

Bouncing bar off chest, flaring elbows perpendicular to torso, or lifting glutes off bench. Keep heels grounded and descent controlled.

📈 Next Session Progression Target

Hit 10, 10, 10 reps -> add +1.25 kg to +2.5 kg next week. If lower reps (8, 7, 6), stay at this weight and aim for +1 rep.

Move #3 • Motion Loop

#3 Seated Dumbbell Lateral Raise

Side Shoulders (Lateral Deltoid Width & V-Taper)

4 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Isolates the lateral deltoid to widen shoulder span, instantly exaggerating the V-taper down to a narrow waist.

📐 Setup, Stance & Grip

> **Sit on edge of a flat bench with chest tilted forward ~15°. Seated position completely eliminates hip swinging and leg cheating.**

💡 Form Cues & Execution

Raise dumbbells outward in the scapular plane (30° forward from torso line). Lead with elbows and keep pinkies slightly elevated. 2s slow descent.

⚠️ Common Mistakes to Avoid

Using heavy dumbbells and shrugging with upper traps, or raising arms straight out sideways/behind torso. Stay in the scapular plane!

📈 Next Session Progression Target

Stay at current weight until hitting 15, 15, 15, 15 clean reps, then increase dumbbell weight by +1 kg per hand.

Move #4 • Motion Loop

#4 Seated Barbell Overhead Press

Front Shoulders (Anterior Deltoids & Core)

3 Sets × 8–10 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

Develops thick anterior deltoids and vertical pressing stability, carrying over to throwing velocity.

📐 Setup, Stance & Grip

> **Sit on upright bench (75°–85° back angle). Grip barbell just outside shoulder width with palms facing forward.**

💡 Form Cues & Execution

Inhale deeply into diaphragm to brace core. Lower bar with control to chin/collarbone level. Press bar vertically overhead, moving head through window at top lockout.

⚠️ Common Mistakes to Avoid

Excessive lower back hyperextension (compensating for tight lats/shoulders) or short-changing depth by stopping above forehead level.

📈 Next Session Progression Target

Hit 10, 10, 10 reps -> increase bar weight by +1.25 kg to +2.5 kg.

Move #5 • Motion Loop

#5 Seated Two-Arm Overhead DB Extension

Triceps (Long Head - 60% of Arm Mass)

3 Sets × 10–12 Reps | 75s Rest | Double Progression

🎯 Target Muscle & Activation

Overhead arm elevation places the triceps long head into maximum stretch under load—crucial for overall upper arm thickness.

📐 Setup, Stance & Grip

Sit upright with back supported. Hold a single dumbbell overhead with both hands in diamond grip under top plate.

💡 Form Cues & Execution

Keep upper arms vertical and pinned near ears. Lower dumbbell behind neck until deep triceps stretch is achieved. Press back up to lockout.

⚠️ Common Mistakes to Avoid

Flaring elbows wide sideways or stopping before deep stretch. Keep upper arms pointing straight up throughout.

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> bump dumbbell weight up by +2 kg.

Move #6 • Motion Loop

#6 Cable Straight-Bar or Rope Pushdown

Triceps (Lateral Horseshoe Cut)

3 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Directly targets the lateral head of the triceps for the distinct carved 'horseshoe' profile on the outer arm.

📐 Setup, Stance & Grip

High cable pulley attachment. Slight forward lean at hips, feet shoulder-width, knees unlocked.

💡 Form Cues & Execution

Pin elbows against ribcage like door hinges. Push bar/rope straight down until arms are fully extended. Squeeze triceps hard for 1 full second at bottom.

⚠️ Common Mistakes to Avoid

Letting elbows drift forward on ascent (turns into shoulder movement) or rocking torso for momentum. Pin elbows tight!

📈 Next Session Progression Target

Hit 15, 15, 15 reps -> drop pin 1 plate (+2.5 kg).

DAY 2

~65 mins

Day 2 — Athletic Lower A

Quad Sweep, Calves, Deep Core & APT Reset

Focus: Pure knee extension without lower back shear, and deep core pelvic reset.

Move #1 • Motion Loop

#1 Smith Machine Squat (Feet 4" Forward)

Quads (Pure Knee Extension - Zero Back Shear)

3 Sets × 6–8 Reps | 2 mins Rest | Double Progression

🎯 Target Muscle & Activation

Forces complete quad isolation. Eliminates lumbar spinal shear and anterior pelvic tilt compression by leaning back into the guided bar path.

📐 Setup, Stance & Grip

> **Rest bar across upper traps. Place feet 4 inches FORWARD from bar line, shoulder-width apart, toes turned 15° out.**

💡 Form Cues & Execution

Keep torso completely vertical. Sit down by flexing knees until thighs hit parallel to floor. Drive through midfoot and heels to stand.

⚠️ Common Mistakes to Avoid

Placing feet directly under the bar (forces hip hinge and lower back strain). Feet MUST be 4 inches forward for pure quad drive!

📈 Next Session Progression Target

Hit 8, 8, 8 reps -> increase barbell weight by +2.5 kg next week.

Move #2 • Motion Loop

#2 Stationary Bulgarian Split Squat

Quads & Glutes (Unilateral Single-Leg Drive)

3 Sets × 8–10 Reps / leg | 90s Rest between legs | Double Progression

🎯 Target Muscle & Activation

Builds single-leg sprint propulsion, corrects left-right muscular imbalances, and stabilizes the pelvic ring.

📐 Setup, Stance & Grip

> Place top of rear foot on bench behind you. Take a comfortable stride forward with front working leg. Torso tilted forward ~20°.

💡 Form Cues & Execution

Hold dumbbells at sides. Drop rear knee straight toward floor until front thigh reaches parallel. Drive through front heel to stand.

⚠️ Common Mistakes to Avoid

Lifting front heel off floor, or hyper-arching lower back. Keep front foot planted flat and core braced.

📈 Next Session Progression Target

Hit 10 reps on both legs across all 3 sets -> increase dumbbells by +1 kg per hand.

Move #3 • Motion Loop

#3 Leg Press (Narrow & Low Foot Placement)

Quads (Vastus Lateralis Outer Sweep & Teardrop)

3 Sets × 10–12 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

Extreme knee flexion angle directs tension exclusively into the outer quad sweep and teardrop above the knee.

📐 Setup, Stance & Grip

> Sit deep into carriage seat with hips pressed down. Place feet LOW on the plate platform and NARROW (approx. 6 inches apart).

💡 Form Cues & Execution

Release catches. Lower sled smoothly until knees hit 90° flexion. Drive through balls and mid-foot back up, stopping just before knee lockout.

⚠️ Common Mistakes to Avoid

Allowing hips/glutes to tuck and lift off the seat pad (causes lumbar rounding). Keep glutes pinned to pad throughout.

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> add +5 kg to +10 kg to the sled.

Move #4 • Motion Loop

#4 Standing Calf Raise on Block with DB

Calves (Gastrocnemius - Upper Diamond & Spring)

4 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Straight-knee calf extension isolates the gastrocnemius diamond head, building reactive sprint elasticity for cricket fielding.

📐 Setup, Stance & Grip

> **Balls of feet on block or plate edge. Hold dumbbell in one hand, other hand lightly touching rack for stability.**

💡 Form Cues & Execution

Lower heels into a deep deficit stretch. HOLD FOR A DEAD 2-SECOND PAUSE at bottom. Explode up onto big toes and hold 1s at top.

⚠️ Common Mistakes to Avoid

Bouncing quickly using Achilles tendon rebound. The 2-second dead stop at the bottom is mandatory to force muscle recruitment!

📈 Next Session Progression Target

Hit 15 reps on all 4 sets with dead pauses -> increase dumbbell by +2 kg.

Move #5 • Motion Loop

#5 Captain's Chair Straight Leg Raise

Deep Core & Lower Abs (APT Fix & Transverse Abdominis)

3 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Directly strengthens the lower abdominal wall and transverse abdominis to tuck the pelvis back into neutral alignment, flattening belly bulge.

📐 Setup, Stance & Grip

> **Support body on captain's chair apparatus with forearms on pads, back pressed firmly against backrest.**

💡 Form Cues & Execution

Keep legs extended (micro-bend if tight). Raise legs to parallel or above. CRUCIAL CUE: At top, curl your pelvis upward toward ribs. 3s slow descent.

⚠️ Common Mistakes to Avoid

Swinging legs with momentum or only flexing hip flexors without posterior pelvic tuck. Curl the pelvis up!

📈 Next Session Progression Target

Hit 15 clean reps without swinging -> add 2-second isometric freeze at top of each rep.

DAY 3

⏱ ~65 mins

Day 3 — Upper Pull + Chicken Day

V-Taper Lats, Mid-Back Posture & Biceps Peak

Focus: Lat width for dramatic V-taper, rear delts and rhomboids to fix desk slump, plus biceps peak hypertrophy.

Move #1 • Motion Loop

#1 Assisted Pull-Up Machine

Lats (Latissimus Dorsi V-Taper Width)

3 Sets × 8–10 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

The gold-standard vertical pull for flaring the lats outward, creating wide upper back proportions that make the waist look tiny.

📐 Setup, Stance & Grip

> Adjust counterbalance pin. Kneel on pad. Take wide overhand grip on outer handles.

💡 Form Cues & Execution

FRONT TO CHEST ONLY. Pull collarbones toward handles by driving elbows down into back pockets. Squeeze lats hard at top, lower to full arm hang.

⚠️ Common Mistakes to Avoid

Pulling behind neck (damages cervical spine and shoulder joints) or cutting range of motion short. Full stretch at bottom!

📈 Next Session Progression Target

Hit 10, 10, 10 reps -> REDUCE the counterweight assistance by 1 pin notch.

Move #2 • Motion Loop

#2 Seated Cable Row (Neutral V-Bar Grip)

Mid-Back (Rhomboids, Lower Traps & Mid-Lats)

3 Sets × 8–10 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

Pulls scapulae together and strengthens mid-back thickness to permanently reverse rounded desk shoulders.

📐 Setup, Stance & Grip

> **Sit tall on cable row bench with feet on footrests, knees slightly bent. Attach close-grip V-bar handle.**

💡 Form Cues & Execution

Sit upright with proud chest. Pull V-bar into navel. Drive elbows back behind torso, pinch shoulder blades together for 1s pause.

⚠️ Common Mistakes to Avoid

Swinging torso backward and using lower back momentum to heave the weight. Keep torso stationary at 90°.

📈 Next Session Progression Target

Hit 10, 10, 10 reps -> drop pin 1 plate down.

Move #3 • Motion Loop

#3 Reverse Pec Deck Machine (Rear Fly)

Rear Shoulders (Posterior Delts & Slouch Fix)

4 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Builds 3D rear deltoid caps, corrects IT desk slouch, and shields the rotator cuff during fast bowling.

📐 Setup, Stance & Grip

> **Sit facing machine pad. Adjust seat so handles are at eye level. Grip handles with neutral or overhand grip.**

💡 Form Cues & Execution

Slight soft bend in elbows. Sweep handles outward in a wide expanding semi-circle. Pull with posterior delts until handles align with shoulders.

⚠️ Common Mistakes to Avoid

Bending arms into a row, or shrugging with upper traps. Lead with back of shoulders in an expansive arc.

📈 Next Session Progression Target

Hit 15, 15, 15, 15 reps -> increase resistance by +2.5 kg.

Move #4 • Motion Loop

#4 Dumbbell Pullover across Flat Bench

Lats & Serratus (Lat Stretch & Ribcage Expansion)

3 Sets × 12–15 Reps | 75s Rest | Double Progression

🎯 Target Muscle & Activation

Loaded lat stretch across horizontal bench combined with intense serratus anterior activation (the 'boxer's muscle' framing the ribs).

📐 Setup, Stance & Grip

> **Lie perpendicularly across a flat bench with only upper back/shoulders supported. Hips slightly lower than bench.**

💡 Form Cues & Execution

Hold single dumbbell with both hands cupping upper plate. With slight elbow bend, lower dumbbell in an arc over head until deep lat stretch is felt. Pull back over face to collarbones.

⚠️ Common Mistakes to Avoid

Bending elbows excessively (turns into tricep extension) or thrusting hips up. Keep hips steady to maximize lat elongation.

📈 Next Session Progression Target

Hit 15, 15, 15 reps -> increase dumbbell weight by +2 kg.

Move #5 • Motion Loop

#5 Seated Dumbbell Hammer Curl

Arm Thickness (Brachialis & Outer Forearms)

3 Sets × 10–12 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Targets the brachialis muscle beneath the biceps, pushing the bicep peak upward and adding visible thickness to the upper arm.

📐 Setup, Stance & Grip

> **Sit tall on upright bench with dumbbells held in neutral grip (palms facing each other like hammers).**

💡 Form Cues & Execution

Pin elbows to sides. Curl dumbbells upward without twisting wrists. Hold peak squeeze for 1 second, 2s eccentric descent.

⚠️ Common Mistakes to Avoid

Swinging shoulders forward to gain momentum, or separating elbows from ribcage.

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> upgrade to next dumbbell weight (+1 kg/hand).

Move #6 • Motion Loop

#6 Preacher Curl (DB or Barbell)

Biceps Peak (Biceps Brachii Short & Long Head)

3 Sets × 10–12 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Eliminates all shoulder assistance and isolates the biceps brachii for maximum peak contraction and arm fullness.

📐 Setup, Stance & Grip

Sit at preacher bench with armpits snug against top pad. Triceps rested flat against angled cushion.

💡 Form Cues & Execution

Grip EZ-bar or dumbbells underhand. Curl weight upward toward chin. Lower weight under control, STOPPING 1 INCH BEFORE FULL LOCKOUT to safeguard bicep tendon.

⚠️ Common Mistakes to Avoid

Hyperextending and locking out elbows forcefully under heavy load (injury risk). Keep tension on muscle bellies!

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> add +1.25 kg to +2.5 kg.

DAY 4

⏱ ~65 mins

Day 4 — Athletic Lower B

Hamstrings, Glute Drive & Cricket Sprint Recovery

Focus: Posterior chain power, glute-ham tie-in, and Soleus calf endurance with 48h recovery buffer before Saturday cricket.

Move #1 • Motion Loop

#1 Barbell Romanian Deadlift (RDL)

Hamstrings & Glute-Ham Tie-In (Hip Hinge)

3 Sets × 8–10 Reps | 2 mins Rest | Double Progression

🎯 Target Muscle & Activation

Builds posterior chain hamstring elasticity and glute hip-extension power. The #1 exercise to prevent sprint tears between cricket wickets.

📐 Setup, Stance & Grip

> **Stand tall holding barbell with shoulder-width overhand grip. Feet hip-width apart, knees unlocked in soft micro-bend.**

💡 Form Cues & Execution

Initiate by pushing hips directly backward toward wall behind you. Shave bar down shins until mid-shin and hamstrings are at maximum stretch. Drive hips forward through heels.

⚠️ Common Mistakes to Avoid

Rounding lower spine or turning into a knee-dominant squat. Spine must stay locked like a tabletop; movement comes entirely from hip hinge!

📈 Next Session Progression Target

Hit 10, 10, 10 reps -> add +2.5 kg to barbell.

Move #2 • Motion Loop

#2 High & Wide Stance Leg Press

Gluteus Maximus (Glute Power & APT Reversal)

3 Sets × 10–12 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

High and wide stance shifts load from quads straight to the gluteus maximus, building explosive hip extension and reversing anterior pelvic tilt.

📐 Setup, Stance & Grip

> **Sit back firmly into sled. Place feet at the VERY TOP EDGE of the platform, WIDE stance (outside shoulder-width), toes flared 20°–30° outward.**

💡 Form Cues & Execution

Lower sled until knees reach 90°. Drive forcefully through HEELS to return sled up without locking knees. Zero lower back strain.

⚠️ Common Mistakes to Avoid

Driving through toes or letting knees collapse inward. Keep knees tracking over pinky toes and drive hard through heels!

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> add +5 kg to +10 kg to sled.

Move #3 • Motion Loop

#3 Lying Hamstring Leg Curl Machine

Hamstrings (Knee Flexion & Sprint Resilience)

3 Sets × 10–12 Reps | 75s Rest | Double Progression

🎯 Target Muscle & Activation

Direct knee-flexion hamstring isolation protects the biceps femoris during explosive sprints and sudden stops on turf.

📐 Setup, Stance & Grip

> **Lie face down with roller pad against lower calves/Achilles tendon. Grasp machine handles.**

💡 Form Cues & Execution

GLUE HIPS FIRMLY INTO THE PAD. Curl heels directly toward glutes. Squeeze hamstrings hard for 1s at top, lower slowly over 2–3s.

⚠️ Common Mistakes to Avoid

Allowing hips to rise up off bench to cheat the weight (strains lower back). Hips must stay glued flat!

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> drop pin 1 plate (+2.5 kg).

Move #4 • Motion Loop

#4 Seated Calf Raise (Weights on Knees)

Calves (Soleus Muscle - Anti-Cramp Sprint Engine)

3 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

With knees bent at 90°, the gastrocnemius is completely deactivated, directing 100% load onto the Soleus—the deep postural muscle that absorbs cricket sprint impact and eliminates cramps.

📐 Setup, Stance & Grip

> **Sit on bench, balls of feet elevated on a 3-inch block. Place heavy barbell or pair of heavy dumbbells across knees with padding.**

💡 Form Cues & Execution

Lower heels into full deficit stretch. Hold for 1 second. Drive up onto big toes and hold peak contraction for 1 second at top.

⚠️ Common Mistakes to Avoid

Doing shallow bounces with light weight. The soleus thrives under heavy, deliberate, full-stretch repetitions.

📈 Next Session Progression Target

Hit 15, 15, 15 reps -> add +2.5 kg onto knees.

Move #5 • Motion Loop

#5 Barbell Over-Bench Plate Pinch / Hold

Forearms & Grip (Wrist Flexors & Isometric Hold)

3 Sets × 45–60s Hold | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Develops iron hand/wrist grip endurance and forearm vascularity, giving direct control and power for cricket bowling, throwing, and heavy lifts.

📐 Setup, Stance & Grip

> **Stand tall holding smooth bumper plates pinched between fingers and thumb, or holding a heavy barbell with palms forward.**

💡 Form Cues & Execution

Stand tall, shoulders rolled back, core braced. Hold plates/barbell isometrically for 45–60 seconds without letting grip slip.

⚠️ Common Mistakes to Avoid

Using lifting straps or letting posture slump forward. Maintain proud chest and iron pinch.

📈 Next Session Progression Target

When you comfortably reach 60 seconds on all 3 sets, increase plate weight.

DAY 5

⏱ ~65 mins

Day 5 — Upper Proportions

Golden Ratio Aesthetics: Delts, Arms & Upper Chest Touch-up

Focus: Deltoid capping, arm circumference, and upper chest density heading into the weekend.

Move #1 • Motion Loop

#1 Incline Chest Press Machine

Upper Chest (Clavicular Pec Density Touch-Up)

3 Sets × 8–10 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

Second weekly stimulus for upper chest accelerates clavicular thickness, building the dense muscular collarbone shelf.

📐 Setup, Stance & Grip

Seat positioned so handles align with upper chest collarbones. Plant feet flat.

💡 Form Cues & Execution

Press diagonally upward and forward. Squeeze upper pectorals hard at peak extension, lower with a 2-second controlled tempo.

⚠️ Common Mistakes to Avoid

Letting elbows flare excessively or lifting shoulders off pad. Keep upper back pinned flat.

📈 Next Session Progression Target

Hit 10, 10, 10 reps -> increase machine weight by +2.5 kg.

Move #2 • Motion Loop

#2 Seated Dumbbell Lateral Raise (Drop-Set)

Side Shoulders (Lateral Delts 3D Capping)

4 Sets × 12–15 Reps (Drop-Set on 4th) | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Maximal lateral delt pump. Sets 1-3 build hypertrophy; the 4th set drop-set forces extreme blood flow and rounded 3D cannonball delts.

📐 Setup, Stance & Grip

Sit on flat bench, slight 15° forward lean. Dumbbells at sides.

💡 Form Cues & Execution

Raise in scapular plane (30° forward). On set 4: complete 12–15 reps, immediately drop dumbbells, grab 30% lighter pair with zero rest and pump out 8–10 more reps!

⚠️ Common Mistakes to Avoid

Swinging torso during the drop-set. Stay strictly seated and let side deltoids do 100% of the work.

📈 Next Session Progression Target

Increase base dumbbell weight once the first 3 sets reach 15 clean reps.

Move #3 • Motion Loop

#3 Reverse Pec Deck Machine

Rear Shoulders (Posterior Delts & Rotator Cuff)

3 Sets × 12–15 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Locks in posterior delt roundness and reinforces upper back posture before weekend rest.

📐 Setup, Stance & Grip

> Face chest pad, handles at eye level, soft elbow bend.

💡 Form Cues & Execution

Sweep arms outward in wide expanding semi-circle. Squeeze back of shoulders for 1 second, control return.

⚠️ Common Mistakes to Avoid

Yanking with back momentum or shrugging traps. Maintain slow, smooth tempo.

📈 Next Session Progression Target

Hit 15, 15, 15 reps -> increase resistance by +2.5 kg.

Move #4 • Motion Loop

#4 Barbell Close-Grip Bench Press

Triceps (Medial/Lateral Heads & Heavy Lockout)

3 Sets × 10–12 Reps | 90s Rest | Double Progression

🎯 Target Muscle & Activation

Heavy compound triceps pressing movement that overloads medial and lateral heads with chest/anterior delt assistance.

📐 Setup, Stance & Grip

> Lie on bench. Grip bar shoulder-width apart (hands ~12–14 inches apart). Do not grip too narrow!

💡 Form Cues & Execution

Tuck elbows close to ribs (~30° angle). Lower bar to lower sternum under control. Press up explosively and lock out triceps hard.

⚠️ Common Mistakes to Avoid

Placing hands touching each other (causes severe wrist and elbow strain). Hands must be shoulder-width apart!

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> add +2.5 kg to barbell.

Move #5 • Motion Loop

#5 Standing Cable Bicep Curl

Biceps (Biceps Brachii Peak & Constant Tension)

3 Sets × 10–12 Reps | 60s Rest | Double Progression

🎯 Target Muscle & Activation

Constant continuous cable tension through the entire range of motion maximizes bicep peak contraction and fullness.

📐 Setup, Stance & Grip

Attach straight or EZ bar to low pulley. Stand tall 1 step back from cable tower.

💡 Form Cues & Execution

Pin elbows to sides. Curl bar upward toward chin. Squeeze biceps hard at peak contraction for 1 second. Lower under 2s control.

⚠️ Common Mistakes to Avoid

Rocking torso or letting elbows drift forward to cheat the curl. Pin elbows tight against ribs.

📈 Next Session Progression Target

Hit 12, 12, 12 reps -> drop pin 1 plate down.

Move #6 • Motion Loop

#6 Seated Barbell Palms-Up Wrist Curl

Forearms (Wrist Flexor Mass & Vascularity)

3 Sets × 15–20 Reps | 45s Rest | Double Progression

🎯 Target Muscle & Activation

Direct wrist-flexor hypertrophy creates dense, thick, vascular forearms visible below t-shirts and shirts.

📐 Setup, Stance & Grip

Kneel next to flat bench with forearms resting flat across pad, wrists hanging just over the edge. Palms facing up.

💡 Form Cues & Execution

Allow barbell to roll gently into fingers for deep forearm stretch. Curl fingers and wrists up toward ceiling. Hold peak flex for 1s.

⚠️ Common Mistakes to Avoid

Lifting forearms off bench during curl. Keep forearms pinned flat to isolate the wrist flexors.

📈 Next Session Progression Target

Hit 20, 20, 20 reps -> increase bar weight by +1.25 kg to +2.5 kg.

🗓️ Weekly Schedule & Cricket Match Alignment

Designed specifically to give Leo a full **48-hour sprint recovery window** between Thursday leg work and Saturday turf cricket.

Day	Split	Focus Muscles	Recovery & Nutrition Status
Mon (Day 1)	Upper Push	Upper Chest, 3D Lateral Delts, Triceps Lockout	Whey + 3.1g Creatine Post-Gym | 2,250–2,350 kcal
Tue (Day 2)	Athletic Lower A	Quads (Feet 4" Forward), Calves, Deep Core & APT Fix	High quad fatigue, zero spinal shear
Wed (Day 3)	Upper Pull	V-Taper Lats, Mid-Back Posture, Biceps Peak	🍗 **Chicken Day**: Home chicken gravy (No whey needed)
Thu (Day 4)	Athletic Lower B	Hamstrings, Glute Drive, Soleus Anti-Cramp Engine	**48h Buffer** begins before Saturday cricket!
Fri (Day 5)	Upper Proportions	Lateral Delt Drop-Set, Arms, Upper Chest Touch-Up	Upper body pump; legs fully rested for match day
Sat (Day 6)	🏏 Turf Cricket	2-Hour High Intensity Sprinting & Fielding	**+50g Lunch Carbs** + 1.5L pre-match hydration
Sun (Day 7)	Full Rest	Mobility, Psoas Stretch, 8,000 Step Stroll	🍗 **Chicken Day**: Full glycogen replenishment

Daily Nutrition Architecture & The 8 Non-Negotiable Staples

2,250–2,350	145–155g	65–75g	250–275g
DAILY CALORIES (KCAL)	PROTEIN FLOOR	HEALTHY FATS	COMPLEX CARBS

3.5–4.0L	3.1g
DAILY HYDRATION	CREATINE DAILY

The 8 Non-Negotiable Daily Staples

1. Whole Eggs Only — Up to 5 / day

Never separate egg whites. Provides bioavailable protein, choline, lutein, and healthy cholesterol for testosterone.

2. Toned Milk — Up to 500ml / day

Split between morning oats and evening tea/coffee. Rich in casein and calcium for bone density.

3. Pottukadalai (Roasted Chana) — 50g / day

Afternoon 4:30 PM crunch providing ~11g plant protein and 5g gut fiber without cooking effort.

4. Peanuts & Cashews — 15g + 15g daily

15g roasted peanuts + 15g raw cashews. Delivers zinc, magnesium, and essential monounsaturated fats.

5. Pure Honey — 1–2 tsp (15g)

Natural morning sweetener for oats or pre-gym fast glucose to top off liver glycogen.

6. Rolled / Instant Oats — 50g daily

Low-glycemic complex carbohydrates and beta-glucan fiber to sustain morning mental and physical energy.

7. Soya Chunks Cap — 45g dry-weighed

Delivers ~23.4g protein on non-chicken days. Must be weighed raw on a digital scale before boiling.

8. Chicken Gravy (Wed & Sun) — Home-Cooked

Fresh morning batch spread across breakfast, lunch, and dinner. No whey isolate powder needed on these days!

Smart 1-to-1 Substitution Matrix (Missing Items)

Missing Staple	Smart 1-to-1 Replacement	Macros Matched	Action
Soya Chunks (45g)	**100g pan-seared Tofu + 1 Boiled Egg**	~21.5g Protein	Sauté tofu cubes in 1/2 tsp oil with turmeric & salt.
Both Soya & Tofu Out	**150g Boiled Sundal (Black Chana) + 1 Egg**	~20.0g Protein	Boil black chana, temper with mustard seeds & curry leaves.
Toned Milk (250ml)	**200g Fresh Plain Curd (Dahi)**	~8.0g Protein	Enjoy with lunch rice or whisk into refreshing buttermilk.

Missing Staple	Smart 1-to-1 Replacement	Macros Matched	Action
Pottukadalai (50g)	**30g Boiled Peanuts or 2 slices bread + 1 egg**	~10.0g Protein	Quick toasted egg sandwich or salted boiled peanuts.
Cashews / Peanuts	**10–12 Raw Almonds or 15g Walnuts**	~3g P, 8g Fats	Soaked or raw with evening green tea/coffee.

Dynamic Nutrition Rebalancing Protocols

Scenario 1: Missed / Skipped Meal

Do not skip protein. Roll the missed protein into evening or dinner: add 2 whole boiled eggs, extra 150ml milk, or 100g curd. Always protect the 145g protein floor!

Scenario 2: Heavy / Unplanned Meal

Do not starve. For remaining meals: drop 1 chapati, skip peanuts, remove cooking oil, and take pure protein (boiled eggs or whey in water). Add a 20-min evening stroll (+2,500 steps).

🧘 Daily 5-Minute Morning Posture & APT Reset Protocol

Perform every morning immediately after using the washroom and drinking 500ml room-temperature water.

1. Stomach Vacuums (Transverse Abdominis Tucking)

4 sets × 20-second isometric holds. Exhale all air completely, pull belly button back toward spine as hard as possible, and hold breath/vacuum. Trains the inner anatomical corset to suck in lower abdominal protrusion.

2. Kneeling Hip Flexor Stretch with Posterior Pelvic Tilt

2 sets × 45–60s per leg. Kneel on one knee, squeeze the rear glute hard to tuck pelvis backward, and shift forward slightly until front hip flexor (psoas) stretches. Reverses hours of IT desk chair sitting.

3. Glute Squeezes & Pelvic Tucks

2 sets × 10 reps (3-second squeeze at top). Lie on back or stand tall. Squeeze gluteus maximus to tuck tailbone under, waking up glute motor units before sitting at desk.
